

SRI SRI WELLBEING

THERAPY CENTRE MANAGEMENT SYSTEM

Business Process Document (BPD)

Version 1.0

Date: July 8, 2026

Prepared for: Sri Sri Wellbeing Therapy Centre

1. Introduction & Purpose

This Business Process Document (BPD) defines the end-to-end operational and system workflow for the Sri Sri Wellbeing Therapy Centre Management System. It expands the original patient-journey diagram into a complete, implementable specification covering clinical workflows, appointment management, patient records, therapist scheduling, room/bed management, pharmacy & inventory, billing, role-based administration, notifications, and a week-by-week development plan.

The document is intended for use by the product/engineering team, clinical stakeholders (Duty Doctors, Specialist Doctors), operations (Receptionist, Pharmacist, Admin), and the project sponsor as the single source of truth for build, test, and rollout.

1.1 Objectives

- Provide a seamless, auditable patient journey from registration to discharge and payment.
- Clearly separate responsibilities across Receptionist, Duty Doctor, Specialist Doctor(s), Pharmacist, and Admin.
- Establish an unambiguous treatment-plan lifecycle: who prepares, reviews, approves, modifies, and finalizes.
- Introduce safety and compliance controls: medical history, allergies, consent, duplicate-patient checks, emergency contacts.
- Support full operational workflows for appointments, therapists, rooms/beds, and pharmacy inventory.
- Replace blanket Admin access with a role-based permission model.
- Define a realistic, week-wise delivery plan from design through UAT, deployment, training, and post-launch support.

2. Scope

- Patient registration (walk-in & online) with duplicate-patient detection.
- Patient medical history, allergies, existing medicines, consent form capture, emergency contact.
- Appointment for booking, rescheduling, cancellation, and follow-up scheduling.
- Duty Doctor consultation, diagnosis capture, and case-sharing with Specialist Doctor(s).
- Specialist Doctor treatment-plan preparation, approval, modification, and finalization workflow.
- In-patient admission, room/bed allocation, transfer, stay extension, upgrade/downgrade, discharge, and room release.
- Pharmacy stock management with batch number, expiry tracking, low-stock alerts, returns, and damaged/expired stock handling.
- Consolidated billing (service + medicine) with invoice generation and payment collection.
- Role-based access control (RBAC) replaces full Admin access.
- Notifications via Email, SMS, WhatsApp, and in-system alerts.
- Admin dashboard, reports & analytics, and audit logs.

3. End-to-End Process Flow

The diagram below extends the original workflow process to include the additional controls and workflows required for a production-ready system

Figure 1: End-to-end workflow process flow across Patient, Receptionist, Duty Doctor, Specialist Doctor(s), Pharmacist, and Admin.

4. Roles & Responsibilities

Each role below has a clearly scoped set of responsibilities.

4.1 Receptionist

- Register walk-in and online patients; run duplicate-patient check before creating a new record.
- Capture/verify demographic details, emergency contact, and consent form status.
- Manage the appointment calendar: booking, rescheduling, cancellation, waiting list, and no-show marking.
- Inform the Duty Doctor on patient arrival.
- Consolidate the service bill (from Specialist Doctor) and the medicine bill (from Pharmacist) into a single invoice.
- Collect payment, issue receipt, and trigger payment-related notifications.
- Send appointment confirmations, reminders, and reschedule/cancellation notifications.

4.2 Duty Doctor

- First point of clinical contact: consults the patient and records vitals/initial notes.
- Assesses the case and checks availability of relevant Specialist Doctor(s); shares patient details for recommendation.
- REVIEWS the treatment plan prepared and approved by the Specialist Doctor for feasibility of admission, room type, and stay duration.
- Admits in-patients, allocates room/bed (as per plan), and owns the in-patient stay end-to-end.
- Records daily progress notes and share updates with the Specialist Doctor.
- Plans of discharge and follow-up, and manage room transfer, stay extension, and upgrade/downgrade requests during the stay.

4.3 Specialist Doctor(s)

- Reviews patient details shared by the Duty Doctor.
- PREPARES the detailed treatment plan (multi-specialist collaboration where required): therapies, number of days.
- APPROVES the treatment plan — the Specialist Doctor is the sole approval authority for the clinical treatment plan.
- MODIFIES the plan when needed (e.g., medicine unavailable, patient response changes) with a logged reason and version of history.
- FINALIZES the approved/modified plan, after which it is locked for execution by the Duty Doctor.
- Assigns or reassigns therapists based on the treatment plan.
- Checks medicine availability with the Pharmacist and generates the service bill for therapies/services.

4.4 Pharmacist

- Checks medicine stock (including batch number and expiry) against Specialist Doctor requests.
- Dispenses/reserves medicine for the patient and updates stock in the system in real time.

- Generates the medicine bill for the Receptionist's consolidated invoice.
- Manages low-stock alerts and notifies Admin/Specialist Doctor when a requested medicine is unavailable and suggests alternatives.

4.5 Admin

- Monitor dashboards: real-time patient flow, appointments, treatment/stay status, billing, and stock levels.
- Manages user accounts and role assignments (create/deactivate users, assign permission sets).
- Reviews system logs and audit trails for compliance and troubleshooting.
- Generates reports & analytics (occupancy, revenue, stock turnover, therapist utilization, no-show rate, etc.).
- Does NOT prepare, review, approve, or modify clinical treatment plans — clinical authority remains with Duty/Specialist Doctors.

5. Treatment Plan Workflow — Prepare, Review, Approve, Modify, Finalize

Figure 2: Treatment plan lifecycle showing prepare → review → approve → modify → finalize hand-offs.

5.1 RACI — Treatment Plan Lifecycle

Activity	Duty Doctor	Specialist Doctor	Receptionist	Pharmacist
Initial consultation & diagnosis notes	R / A	I	I	-
Share case for specialist recommendation	R	I	-	-
Prepare treatment plan (draft)	C	R / A	-	-
Review plan for admission & stay feasibility	R / A	C	I	-
Approve treatment plan	I	R / A	-	-
Modify treatment plan	C	R / A	-	-
Finalize treatment plan (lock version)	I	R / A	-	-
Admit patient & allocate room	R / A	I	I	-
Daily progress updates	R / A	I	-	-
Checking medicines/giving alternative medicine	I	C	I	R/A
Discharge & follow-up planning	R / A	C	I	-

R = Responsible (does the work) A = Accountable (owns the outcome) C = Consulted I = Informed

6. Patient Management

6.1 Registration, Medical History & Duplicate-Patient Check

- Capture: name, DOB, gender, contact, address, and presenting concern.
- Duplicate check runs automatically on name + phone/email + DOB fuzzy match at the point of registration; matches are surfaced to the Receptionist for confirmation before a new record is created.
- Medical history: past illnesses, surgeries, chronic conditions, family history (structured fields + free text), existing medicines.
- Allergies: structured allergy list (drug, food, environmental) with severity flag — surfaced as a warning banner to Duty doctor.

6.2 Emergency Contacts

- Minimum one emergency contact (name, relationship, phone) mandatory for in-patient admission.

7. Appointment Management

Workflow	Description	Owner
Scheduling	Walk-in or online booking; slot selection by date/time and (optionally) preferred Specialist Doctor; auto-confirmation notification.	Receptionist / Patient (online)

Workflow	Description	Owner
Rescheduling	Patient or Receptionist selects a new slot; original slot is released back to availability; both parties are notified.	Receptionist / Patient
Cancellation	Patient/Receptionist cancels with a reason code; slot released; refund/adjustment routed to Billing if prepaid.	Receptionist / Patient
No-show	If the patient does not check in within a configurable grace period, appointment is auto-marked "No-show"; triggers a follow-up notification and updates no-show analytics.	System / Receptionist
Follow-up	Duty/Specialist Doctor schedules a follow-up visit at discharge; system auto-creates a pending appointment and reminds the patient.	Duty Doctor / Specialist Doctor

8. Specialist doctor Scheduling & Management

- Scheduling: Therapist shift/availability calendar maintained by duty doctor; Specialist Doctor sees only available slots when assigned.
- Assignment: Specialist Doctor assigns another specialist doctors/therapist(s)(if required) to a treatment plan based on specialization and availability.
- Reassignment: If a therapist is unavailable (leave/overload), Specialist Doctor reassigns; patient and therapist notified; reassignment reason logged.
- Session Tracking: Each therapy session is logged against the treatment plan with date, duration, and status (completed/missed/rescheduled).
- Progress Updates: Therapist records session-level progress notes; aggregated view shared with Specialist Doctor and Duty Doctor for daily review.

9. Room & Bed Management

Step	Description
Availability	Real-time room/bed availability by type (general/deluxe/suite) visible to Duty Doctor at plan-review and admission stage.
Allocation	Room/bed allocated at admission per the finalized treatment plan; status changes to "Occupied".
Room Upgrade / Downgrade	Patient/family or clinical need triggers a room-type change request; Receptionist confirms rate difference; Duty Doctor updates the stay record.
Discharge	Specialist Doctor finalizes discharge readiness; Duty Doctor completes discharge summary; room marked "Pending Housekeeping."
Room Release	After housekeeping/turnaround confirmation, room status resets to "Available" for new allocation.

10. Pharmacy & Inventory Management

Area	Description
Stock, Batch & Expiry	Every medicine unit tracked by batch number and expiry date; FEFO (first expiry-first-out) dispensing logic.
Low-Stock Alerts	Configurable reorder threshold per medicine; system auto-notifies Pharmacist and Admin when stock falls below threshold.
Damaged / Expired Stock	Damaged or expired batches are quarantined, written off with reason, and removed from dispensable inventory; audit entry created.
Supplier Details	Supplier master (name, contact, GSTIN, address, lead time) maintained by Pharmacist/Admin.
Purchase Workflow	Purchase requisition raised on low stock → Admin/Pharmacist approval → Purchase Order to supplier → Goods Receipt → stock updated with new batch/expiry.

11. Billing & Payment

- Service bill generated by Specialist Doctor (therapies/consultation) and medicine bill generated by Pharmacist flow into the Receptionist's consolidation step.
- Receptionist generates a single combined invoice, applies any discounts adjustments (manual, MVP), and collects payment (cash/card/UPI).
- Receipt issued to patient; payment status and mode logged for reporting.
- Room stay charges (including extensions/upgrades) are itemized separately within the combined invoice for transparency.

PS: There is no refund and the patient can't exist in the middle of the retreatment. Once the treatment plan is fixed by the specialist doctor, the fee amount should be paid by the patient.

12. Role-Based Access Control (RBAC)

Full, unrestricted Admin access is replaced with a permission-matrix model. Each role is granted the minimum access required (principle of least privilege); Admin's own access is also scoped by permission level and is fully audit-logged.

Module	Admin	Duty Doctor	Specialist Doctor/Therapist	Pharmacist	Receptionist
Patient Registration & Records	Full	View + Edit	View + Edit	-	View
Appointment Management	Full	View	Full	-	View
Treatment Plan (Prepare/Approve)	Full (config only)	Review only	Prepare/Approve/Modify	-	-
Admission & Room Management	Full (config)	Full	View	-	-
Therapist Scheduling	Full	View	Assign/Reassign	-	-
Pharmacy & Stock	Full (config)	View	View	Full	-
Billing & Payment	Full (reports)	View	View	View	Full (collect)
User & Role Management	Full	-	-	-	-

Module	Admin	Duty Doctor	Specialist Doctor/Therapist	Pharmacist	Receptionist
Reports & Analytics	Full	-	-	-	-
Audit Logs	Full	-	-	-	-

Note: "Admin (config)" indicates that Admin can configure workflow parameters (e.g., stay-extension approval routing, price lists) but cannot directly author or approve clinical decisions.

13. Notifications — Email, SMS, WhatsApp & System Alerts

Trigger Event	Recipient(s)	Channel(s)	Timing
Appointment confirmed	Patient	SMS, WhatsApp, Email	Immediate
Appointment reschedule / cancellation	Patient	SMS, WhatsApp	Immediate
Treatment plan approved / modified	Duty Doctor, Specialist Doctor	System alert, Email	Immediate
Admission confirmed	Patient, Emergency Contact	SMS, WhatsApp	Immediate
Low-stock threshold breached	Pharmacist, Admin	System alert, Email	Real-time
Medicine unavailable / substitute suggested	Specialist Doctor	System alert	Immediate
Discharge & follow-up scheduled	Patient	SMS, WhatsApp, Email	At discharge
Invoice generated / payment received	Patient	SMS, Email (with receipt)	Immediate
Purchase order raised / goods received	Pharmacist, Admin	Email, System alert	Immediate

14. Entity-Relationship (ER) Diagram

14.1 Role-Focused ER Diagrams & Responsibilities

The master ER diagram in Figure 3 shows the complete data model. The views below re-center that same model around each role, showing only the entities a role directly creates, reviews, or owns, paired with a plain-language summary of that role's responsibilities.

14.1.1 Patient

Figure 3: Entities associated with the Patient record.

Responsibilities:

- ∄ Provides accurate details, medical history, allergies, existing medicines, and emergency contact at registration.
- ∄ Reviews and digitally sign the consent form(s) before treatment begins.
- ∄ Books, reschedules, or cancels appointments (online or via Receptionist) and check in on the visit date.
- ∄ Receives and acts on notifications (confirmation, reminders, discharge/follow-up, invoice).

14.1.2 Receptionist

Figure 4: Entities created and managed by the Receptionist.

Responsibilities:

- ∄ Creates and maintains the PATIENT record, running the duplicate-check before confirming a new registration.
- ∄ Owns the full APPOINTMENT lifecycle: booking, reschedule, cancellation, and no-show marking.
- ∄ Consolidates the service bill and medicine bill into a single BILL/INVOICE, collects payment, and issues the receipt.
- ∄ Triggers and tracks patient-facing NOTIFICATIONS (confirmation, reschedule, payment receipt).

- Does not create or edit the TREATMENT_PLAN — that entity is only referenced (read-only) to confirm patient arrival to the Duty Doctor.

14.1.3 Duty Doctor

Figure 5: Entities the Duty Doctor reviews and owns (admission & stay).

Responsibilities:

- Consults the patient first, recording vitals and initial notes against the PATIENT entity.
- Shares the case with the Specialist Doctor and, once the TREATMENT_PLAN is prepared, REVIEWS it for admission and stay feasibility (reviewed_by field).
- Owns the ADMISSION/STAY entity end-to-end: admits the patient, records daily progress notes, and plans discharge.
- Allocates, extends, and upgrades/downgrades the ROOM/BED linked to the admission.
- Cannot change the TREATMENT_PLAN's approval status — clinical modification/approval remains with the Specialist Doctor.

14.1.4 Specialist Doctor(s)

Figure 6: Entities authored or authorized by the Specialist Doctor.

Responsibilities:

- ⊄ Is the sole author of the TREATMENT_PLAN's clinical content: prepares, approves, modifies, and finalizes it.
- ⊄ Assigns and reassigns THERAPISTS to the plan and reviews THERAPY_SESSION records/progress.
- ⊄ Checks MEDICINE/STOCK availability with the Pharmacist after finalizing therapy/medicine components of the plan & gives the alternative medicine if the medicine is not available.
- ⊄ Generates the service bill component for therapies and consultations.
- ⊄ Owns clinical accountability — the Duty Doctor may request changes, but only the Specialist Doctor can approve them.

14.1.5 Pharmacist

Figure 7: Entities owned by the Pharmacist — stock, dispensing, suppliers, purchase.

Responsibilities:

- ⊄ Maintains MEDICINE/STOCK accuracy: batch numbers, expiry dates, quantities, and low-stock thresholds.
- ⊄ Dispenses/reserves medicine against a MEDICINE_DISPENSE record for each patient and updates stock in real time.
- ⊄ Generates the medicine-bill component that feeds the Receptionist's consolidated invoice.
- ⊄ Manages damaged/expired stock write-offs and maintains SUPPLIER details.
- ⊄ Raises and tracks PURCHASE_ORDERS for replenishment and notifies Admin/Specialist Doctor when stock is unavailable.

14.1.6 Admin

Admin — ER View (governance: roles, audit, notifications, dashboards)

Figure 8: Admin's governance scope — roles, audit, notifications, dashboards.

Responsibilities:

- ✎ Creates and manages USER accounts and assigns each user with exactly one ROLE/PERMISSION set.
- ✎ Reviews the AUDIT_LOG for compliance, troubleshooting, and change tracking across all modules.
- ✎ Configures NOTIFICATION rules.
- ✎ Views operational DASHBOARDS (patients, appointments, billing, stock) in read-only mode for oversight and reporting.
- ✎ Has no authority to author, approve, or modify a TREATMENT_PLAN, and cannot directly edit clinical or in-progress billing records — Admin access is governance and oversight, not clinical or transactional execution.

Based on your **Sri Sri Wellbeing Therapy Centre Management System**, here's a simple and professional **Backend & Admin Panel Development Workflow** that can be included in your BPD or project proposal.

15. Development Plan

Phase	Days	Focus
Phase 1	Day 1–10	Discovery, DB/ER design, Auth & RBAC backend
Phase 2	Day 11–20	Patient + Appointment Management backend
Phase 3	Day 21–30	UI/UX Design (all role screens + design system)
Phase 4	Day 31–40	Duty Doctor + Specialist Doctor (Treatment Plan engine) backend, wired to UI
Phase 5	Day 41–50	Pharmacist, Room Allocation, Therapist/Session, Billing, Notification modules
Phase 6	Day 51–60	Admin Dashboard finalization, system integration, full testing, UAT, deployment

16. Backend & Admin Panel Development Workflow

Development Modules

16.1 Authentication & User Management Module

Features

- Login & Logout
- Forgot Password
- Reset Password
- Change Password
- User Profile
- Role-Based Access Control (RBAC)
- User Management
- Permission Management
- Session Management
- Activity Logs

Deliverables

- Secure authentication system
- Role & permission management
- User account management
- Session tracking

16.2 Admin Dashboard Module

Features

- Dashboard Overview
- Today's Appointments
- Patient Statistics
- Doctor Statistics
- Therapist Statistics
- Room Occupancy

- Pharmacy Stock Summary
- Payment Summary
- Revenue Summary
- Notifications
- Reports Shortcut

Deliverables

- Interactive dashboard
- Real-time statistics
- KPI reports

16.3 Patient Management Module

Features

- Patient Registration
- Duplicate Patient Check
- Medical History
- Allergies
- Existing Medicines
- Emergency Contact
- Consent Forms
- Document Upload
- Patient Search

Deliverables

- Complete patient profile
- Digital medical records
- Patient history management

16.4 Appointment Management Module

Features

- Walk-in Registration
- Online Appointment
- Appointment Calendar
- Appointment Confirmation
- Rescheduling
- Cancellation
- No-show Management
- Follow-up Appointment

Deliverables

- Appointment scheduling system
- Calendar management
- Notification integration

16.5 Duty Doctor Module

Features

- Patient Consultation
- Diagnosis
- Clinical Notes
- Medical Assessment
- Refer to Specialist
- Review Treatment Plan
- Admission Decision
- Room allocation
- Daily Progress Notes
- Discharge Planning

Deliverables

- Consultation management
- Clinical workflow
- Admission workflow

16.6 Specialist Doctor/Therapist Module

Features

- Review Patient Details
- Prepare Treatment Plan
- Modify Treatment Plan
- Approve Treatment Plan
- Finalize Treatment Plan
- Assign Therapist/doctors
- Therapist Scheduling
- Therapist Assignment
- Reassignment
- Attendance
- Session Creation
- Session Tracking
- Progress Notes
- Treatment Completion
- Review Progress
- Generate Service Bill

Deliverables

- Treatment planning module
- Clinical approval workflow
- Therapist assignment
- Session management

- Therapist scheduling
- Progress tracking

16.7 Room Allocation & In-Patient Management Module

Features

- Admission
- Room Availability
- Bed Availability
- Room Allocation
- Bed Allocation
- Room Transfer
- Stay Extension
- Room Upgrade
- Room Downgrade
- Discharge
- Room Release

Deliverables

- Complete room management
- Bed management
- In-patient workflow

16.8 Pharmacy Management Module

Features

- Stock Management
- Batch Number

- Expiry Management
- Low Stock Alert
- Supplier Management
- Purchase Orders
- Medicine Dispensing
- Damaged Stock and Expired Stock

Deliverables

- Inventory management
- Pharmacy workflow
- Purchase workflow

16.9 Billing & Payment Module

Features

- Service Billing (includes treatment and stay (if required))
- Medicine Billing
- Combined Invoice
- Advance Payment
- Final Payment
- Payment History
- Receipt Generation
- Payment Modes
- Invoice Management

Deliverables

- Billing system
- Payment tracking
- Invoice management

16.10 Notification Module

Features

- Email Notifications
- SMS Notifications
- WhatsApp Notifications
- System Alerts
- Appointment Reminder
- Payment Reminder
- Follow-up Reminder
- Low Stock Alert

Deliverables

- Notification engine
- Automated reminders
- Alert management

16.11 Reports & Analytics Module

Features

- Patient Reports
- Appointment Reports
- Revenue Reports
- Doctor Reports
- Therapist Reports
- Pharmacy Reports
- Room Occupancy Reports
- Payment Reports

- Audit Logs

Deliverables

- Reporting dashboard
- Analytics
- Export reports

16.12 System Settings Module

Features

- Clinic Settings
- Profile Information Management
- Payment method Settings
- Notification Templates
- Date & Time Settings
- Backup Settings

Deliverables

- Master settings
- Configuration management

16.13 Testing & Quality Assurance

Testing Activities

Unit Testing

- Individual module testing
- API validation
- Database validation

Integration Testing

- Module integration
- Workflow validation

- API integration

Functional Testing

- End-to-end workflow
- Business rule validation
- User acceptance scenarios

Security Testing

- Authentication
- Authorization
- Role permissions
- Session management
- Data security

Performance Testing

- Load testing
- Response time
- Concurrent users

User Acceptance Testing (UAT)

- Client testing
- Feedback
- Bug fixing
- Final approval

Deliverables

- Test Cases
- Test Reports
- Bug Reports
- UAT Sign-off

- Final Release Candidate
